GRAFFITI ART PROGRAMMING PRESENTS

AT-HOME PRINTING

REGISTRATION

TAPE FRAME

Place your plate on your registration sheet. Add tape to the corners, creating a frame.

Repeat this process with your paper, making sure that all of the margins are equal, so that your print will be centred.

To print, line your paper up with one side of the outer frame and lightly float the paper to match with the other corners.

OUTLINE

Place your printing paper on your registration sheet and trace it with a pencil.

Place your plate on your registration sheet and trace it as well, keeping it centred with your paper outline.

You can use double-sided tape to secure your plate and start printing, or continue on to T-bar registration.

T-BAR

Measure out the halfway point of your paper on the top and bottom of your registration sheet.

Line up all of the paper you'll
be printing on – they should
be cut to the same size.

Offset each paper by about
a 1/4 inch on the shorter end,
still keeping the longer sides
perfectly in line with each other.

DIY KENT

Add foamcore, mat, or wood to your regsitration board, creating an L-shape. You'll line up your plate to the L-shape for printing.

Add tape or more foamcore to the L-shape like so. The distance between the centre edge will be the width of your margins, and will guide you when placing your paper.

To print, secure your plate to your board. Align your paper with the tape guides and lay on top of your plate.

Make a small mark in the centre of your paper, at the top and the bottom.

Lining up your ruler with the pencil marks to make sure your line will be straight, drag your pencil across each piece of paper in your stack.

REGISTRATION PINS

Place your plate onto your registration board. Use tape or small pieces of board (for a more secure registration board) in order to create a frame for your plate.

Add your paper guides as you would with the kento method.

Place your registration pins onto the board. You'll need two and you can secure them with packing tape.

Stagger your papers in the other direction and do the same to the opposite end of the paper.

To print, secure your plate to your sheet. Align the lines on your paper up with the lines on your sheet to register your prints.

Position your paper on top
of the plate, fitting into your
kento guide marks and clip
the registration tabs into place.

Add masking tape to the tabs to secure. Continue adding tabs this way for each paper you'll be using.

When you're ready to print, place your plate in position, and you can secure with some double-sided tape.
